

ATLAS MERIDIAN CORPORATION

Q1 2025 Product Report

Engineering & Product Division · March 28, 2025

01

Executive Summary

Q1 2025 demonstrated strong momentum across all product lines. Monthly active users grew 18% quarter-over-quarter to 1.24 million, driven by accelerated enterprise onboarding in EMEA and sustained organic growth in the SMB segment. The platform processed 4.7 billion API calls during the quarter, maintaining 99.97% uptime against a 99.9% SLA target.

The engineering team shipped 14 major releases and resolved 312 customer-reported issues — a 23% improvement in resolution velocity compared to Q4 2024. Migration to the new event-streaming architecture, completed in February, reduced median API latency from 38 ms to 11 ms for read-heavy workloads.

Revenue contribution grew to \$9.4 M for the quarter, up 31% year-over-year. Net Revenue Retention held at 118%, indicating strong expansion within the existing customer base despite intensifying competition.

Engineering Highlights

Initiative	Status	Impact
Event-Streaming Architecture Migration	Shipped	–71% read latency
Multi-Region Failover (EU-West + AP-South)	Shipped	RPO < 30 s
Zero-Downtime Schema Migrations	Shipped	0 maintenance windows
Automated Canary Rollout Pipeline	Shipped	Error budget preserved
WebAssembly Compute Layer (Beta)	In Progress	Target Q2 2025
Federated Search Index v2	In Progress	Target Q2 2025
FIPS 140-2 Compliant Encryption	Planned	Target Q3 2025

04

Reliability & Incident Summary

Three severity-2 incidents occurred during the quarter, all resolved within the 4-hour response SLA. No severity-1 (customer-impacting) incidents were recorded. MTTR for S2 incidents improved to 52 minutes, down from 1h 41m in Q4 2024.

Total incidents (S1 / S2 / S3)	0 / 3 / 11
MTTR — S2 incidents	52 min
Error budget consumed	14 % of 30-day window
Change failure rate	0.8 %
Deployment frequency	3.2 per day

Error budget represents 100 % minus achieved uptime over a 30-day rolling window. A result below 50 % consumed indicates a healthy release cadence.

05

Q2 2025 Roadmap Commitments

The following commitments have been reviewed by engineering leads and approved by the product steering committee. Scope adjustments require VP-level sign-off.

WebAssembly Compute Layer — GA

Enables sandboxed edge compute with sub-millisecond cold-start. 12 design partners in beta. GA gated on compliance attestation and a 72-hour soak.

Federated Search Index v2

Purpose-built inverted index with cross-tenant queries and row-level security. Expected 5× throughput improvement for large-catalogue customers.

SOC 2 Type II Recertification

Audit window opens April 7. Evidence collection automated via Vanta. No scope changes vs. the prior-year audit.

Self-Serve Usage Analytics

Customer-facing dashboard for API usage, error rates, and latency percentiles. Targets a 20 % reduction in support tickets.
